- :: Ideal for urgent messages or alerts
- :: Scalable – start small and add additional rooms as and when required
- :: Free ongoing updates and support
- :: 'Private message' function

**See overleaf  
for more  
details...**

Do you ever need to get urgent information through to a teacher or pupil in a remote classroom? For example:

- **Check if a student has shown up for a class.**
- **Confirm an out of school activity has been cancelled.**
- **Notify staff/students of a room change.**
- **Request a student to attend the office.**

Well, it's easy using the NEW 'Despatch' software system from AMT. Just type your message and decide which rooms should receive it by ticking the appropriate boxes. Then hit "Send".

That's it! The message will flash up on the screen/interactive whiteboard in your chosen room(s). You can choose how long to display the message, and specify whether it can be dismissed by the recipient. You can even specify the size, colour, font and position of the message.

You can also elect to send a 'private message'. In this event the teacher will be informed that there is a message waiting, but the actual

message content will not be displayed until they are ready to view it.

The Despatch Messaging System will operate on virtually any networked PC, and will display on your projector, interactive whiteboard, touchscreen, etc.

Despatch has been designed to cause minimal disturbance to the lesson, while still imparting vital information to staff and students alike.

In common with our other innovative Messaging & Digital Signage products, we will continue to add additional useful features to Despatch. It can also be customised if you have a specific requirement not currently offered.

We can offer a range of alternative Messaging and Digital Signage Systems if the Despatch system doesn't suit your needs. Please don't hesitate to ask for further details.
